(g) Whenever the Medical Director is notified by a party seeking an appointment with a Qualified Medical Evaluator, or otherwise becomes aware, that the QME is not available and not responding to calls or mail at a location listed for the QME, a certified letter will be sent to the QME

§ 46.1. Guidelines for the Evaluation of Foot and Ankle Disability

(a) For all claims before January 1, 2005, not subject to section 46.1(b), the method of measuring the elements of foot and ankle shall be set forth below in the “Guidelines for Evaluation of Foot and Ankle Disability” as adopted by the Industrial Medical Council on October 28, 2000. Permanent disability shall be described by applying the provisions of the Permanent Disability Rating Schedule adopted by the Administrative Director pursuant to section 9805 of Title 8 of the California Code of Regulations.

I. Introduction

A. Basic Purpose of the Guidelines

~~The purpose of these evaluation guidelines is to develop a more uniform method of evaluating foot and ankle injuries without diminishing the individual expertise of the participating evaluator. This method will allow involved parties (particularly the WCAB) to review evaluator's reports, which employ a more standardized format.~~

B. General Approach

~~The evaluator shall personally take the history from the injured worker and perform the examination. The evaluator may have an assistant make an initial outline of the injured worker's history or take excerpts from prior medical records, however the evaluator must review the excerpts and/or outline with the injured worker. Occupational and medical questionnaires may be useful to assist the injured worker in compiling the details of the injury prior to the consultation with the evaluator. Any discrepancies in the various sources of information should be identified and clarified by the evaluator.~~

~~The injured worker shall at all times be evaluated in a compassionate and respectful manner.~~

~~The evaluator will should introduce him/herself, and explain to the injured worker the purpose and scope of the evaluation.~~

~~The evaluator must inform the injured worker of any significant medical findings, which could impact on his or her health. These findings may not be directly related to the work injury.~~

~~II. Components of the Report~~

~~A. Initial Page~~

~~Address the report to the referring party(ies) or the DEU office noted on the Request for Summary Rating form. Report on the face to face time and factors influencing the complexity of the examination, being aware that complexity factors may be medical in nature or medical legal, such as apportionment.~~

~~Give names and professional description of any persons assisting with the report or performing diagnostic or consultative services. Note if there were communication difficulties (e.g. aphasia) or translation services required for the evaluation.~~

~~B. History~~

~~Medical records and history questionnaires shall be used only as an adjunct to the history as told by the patient to the physician. The physician shall personally take the history from the injured worker. Any discrepancies in the history between various sources must be identified and clarified. An appropriate history shall include:~~

~~D. Work history, including previous and current jobs, and some description of previous, and current job duties. Review and comment on a formal job description if it is available for review. Particular attention for the foot and ankle is placed on requirements for standing, walking (over even or uneven surfaces), running, squatting, sitting, kneeling, climbing, jumping, hopping, balancing, lifting, carrying, pushing or pulling with the legs or feet and use of foot controls.~~

~~This section is especially important, as the physician must extract sufficient history to assess the injured worker's pre-injury functional capacity for work activity. Determining the previous work capacity within the past several years best assesses this. Regular non-work activities can also be taken into account to determine previous functional levels.~~

~~E. Description of how and when the injury occurred and the type of occupational exposure.~~

~~F. Summary of the course of treatment for the injured worker since injury includes type of treatment and response to treatment to date.~~

~~G. Current treatment including type and frequency.~~

~~H. Description of pertinent past medical history including previous and or subsequent injuries or illnesses, and a description of any prior neurological or musculoskeletal disabilities particularly relating to the lower extremity.~~

~~I. Pertinent other past medical history and other contributing medical, psychological, or social concerns.~~

~~C. Current Complaints~~

The physician shall outline in the patient's words, his or her current complaints. This shall include all parts affected by the injury or injuries claimed, the character (quality), severity, frequency, and any radiation of symptoms, and what activities or interventions precipitate, aggravate or reduce symptoms. Delineate existing associated signs and symptoms of the injury.

NOTE: The patient's own description of symptoms shall be "translated" later by the physician into ratable language as defined by Packard-Thurber.

Any subjective complaints regarding work activity or other activities of daily living (ADL's) shall be outlined in this section. For the foot and ankle, any functional complaints in such as standing, walking (over even or uneven surfaces), running, squatting, sitting, kneeling, climbing, jumping, lifting, carrying, balancing, pushing or pulling with the legs or feet and the use of foot controls shall be listed in this section.

The use of assistive devices (if any) for mobility such as a wheelchair, cane, or crutches, shall be elicited and described as to type and frequency of use, as well as the need and type of any orthotic or prosthetic devices and special shoes.

D. Medical Records Reviewed

In this section, the physician shall list all records reviewed in the preparation of the report. Extractions from those records may be listed in this section or summarized in the History section of the report.

D. Physical Examination of the Foot and Ankle for Disability Evaluation

(1) The physical examination shall include relevant description of body habitus, and any general observations such as a limp, obvious discomfort when standing, difficulty in transferring, etc. that may be helpful in determining previous or current functional capacity. Note any assistive devices, prosthetics, orthotics, or shoes that the patient uses and describe.

(2) In all measurements or observations performed, if normal, the physician may simply state "normal". Describe tests rather than just use an acronym.

(3) Inspection: The physician shall describe any skin abnormalities, surgical scars, obvious atrophy or skeletal deformities (e.g. angulation of healed fractures, varus or valgus joint deformity, or amputation). The injured parts of the foot or ankle shall be inspected for soft tissue swelling and dislocation.

(1) Amputations shall be described anatomically.

(1) Affected areas shall be palpated for tenderness. Any painful areas shall be reported. Any alterations of skin temperature or vascular status shall be noted.

(6) Joint examination

a. The physician shall assess the affected joints and compare them to the uninjured side.

a. Joint effusion, enlargement, erythema, and instability shall be described if present. Pertinent clinical tests used in joint assessment (i.e. drawer signs, Thompson's sign, etc.) shall be described and noted as normal or abnormal. If there is an abnormal range of motion that is not secondary to the injury, give an explanation for this finding.

b. ~~Goniometric measurement is the accepted method of evaluation of range of motion for the foot and ankle. A description of goniometric methods of measurement and estimated normal values for the foot and ankle can be found in Packard Thurber, Evaluation of Industrial Disability, Second Edition, Oxford University Press. The physician shall measure active range of motion of all affected joints of the foot and ankle as compared to the uninjured side. Any abnormal, excessive, or limited range of motion or ankylosis shall be described.~~

~~For bilateral injuries estimate the normal range of motion. Note whether the injured worker gave full effort on active range of motion and if there was any unexplained discrepancies in formally measured versus observed range of motion, or whether limitations in active range of motion was based on pain. If so, list arc range of motion precluded or inhibited by pain. If the measurement obtained were invalid based on lack of effort, so note.~~

~~(7) Leg lengths shall be measured in inches from Anterior Superior Iliac Spine (ASIS) to medial malleolus and if appropriate, other methods of leg length measurement may be included.~~

~~D. Gait and other functional assessment: Any abnormality of gait shall be described (propulsive vs. apropulsive, angle and base of gait, etc.). Evaluate patient's ability to squat, stand, kneel, heel and toe walk.~~

~~(9) Neurological examination of the foot or ankle shall be performed for any complaints of weakness, sensory impairment or dysesthesias. This shall include assessment of:~~

~~a. Motor examination~~

~~i. Atrophy of specific muscles or muscle groups of the lower extremities or foot should be described. General muscle bulk is assessed by measurements of the calves and thighs in inches. Circumferential measurements of the foot and ankle should be recorded. Calf measurements are taken at the point of maximum circumference. Thigh circumferences are taken at the point one third the distance from the upper pole of the patella to the umbilicus.~~

~~ii. Muscle tone shall be described as increased, normal or decreased.~~

~~i. Muscle strength shall be graded using a scale such as those found in Appendix A. Muscle weakness due to neurologic impairment shall be differentiated by the examiner from lack of effort due to pain, disuse or lack of effort due to other causes. In cases of questionable effort, muscle weakness due to neurologic deficit can generally be corroborated by appropriate electrodiagnostic testing including needle EMG and a nerve conduction study performed by an appropriately qualified physician.~~

~~b. Sensory examination shall include a screening of touch and pain sensation (pinprick) in pertinent foot, ankle and lower extremity dermatomes/peripheral nerve distributions and of joint proprioception of any involved joints. Any abnormalities shall be described fully and correlated with peripheral nerve or dermatomal pattern. If the pattern of sensory impairment is nonphysiological, this should be noted~~

~~c. Deep tendon reflexes shall be obtained and graded as 0 (absent) to 4+ (hyperactive with clonus). Plantar responses and any other abnormal reflex responses shall be recorded.~~

d. Coordination shall be assessed if this is a presenting complaint, or if there is suspicion of foot, ankle or lower extremity motor coordination impairment. In this case, finger to nose, heel to shin and gait should be described.

(10) Screening exam of remainder of neurological or musculoskeletal system if there is any evidence of more widespread involvement.

~~D. Diagnostic Studies in Lower Extremity Disability Evaluation~~

(1) Order diagnostic studies only when the studies may alter the recommended plan or the evaluator's opinion regarding factors of disability. The evaluator must document the need for these additional studies.

(2) List any diagnostic procedures performed, as well as the dates and the results of the procedures. Provide the name, specialty, qualifications and opinion of any consultants.

~~(3) Methods of Assessment~~

a. Clinical diagnosis of foot and ankle problems can usually be made on history and physical examination with the help of x rays.

b. In addition to an x ray, testing may include:

i. MRI

ii. CT

iii. Bone Scan

iv. Arthrogram

v. Use of mechanical devices to test strength and stability.

vi. EMG/NCV testing is appropriate only if there is a suggestion of nerve damage or nerve compression.

vii. Vascular studies are indicated only if there is associated vascular disruption/damage or a secondary vascular complication.

viii. Blood Studies

ix. Ultrasound

x. Diagnostic, but not therapeutic, blocks

y. There are other tests that may be performed with proper documentation of necessity:

~~G. Diagnosis~~

List the relevant diagnosis(es). When appropriate, state if the injury is right or left sided or bilateral.

~~H. Opinions & Discussion~~

State that the report represents your opinions and how those opinions were derived after carefully reviewing the forwarded medical information, the injured worker's subjective statements offered during consultation, and examination findings.

~~I. Causation~~

~~State an opinion as to whether the injury or illness that led to the disability arose out of the employment (AOE).~~

~~J. Permanent and Stationary~~

~~State whether the injured worker is permanent and stationary and reasons for that opinion. The term permanent and stationary means that the injured worker has reached maximal improvement or his condition has been stationary for a reasonable period of time.~~

~~K. Temporary Disability~~

~~If the injured worker is not permanent and stationary, describe the current work restrictions that might allow the worker to return to work immediately, any additional treatment and the anticipated length of time necessary to achieve permanent and stationary status.~~

~~L. Factors of Disability~~

~~The evaluator will describe the subjective and objective components of disability. Do not provide a "rating" but describe the medical information in such a way as to be used by raters, judges and other concerned parties. The following information shall be included:~~

~~1. Subjective Factors of Disability~~

~~Translate the injured worker's symptoms into ratable language using the terminology found in section 9727 of title 8 of the California Code of Regulations, and reproduced here in Appendix B. Subjective factors are those that cannot be directly measured or observed, such as pain, stiffness, and paresthesia. It is important to note that this is the physician's assessment of residual symptoms and is based on the examination, the physician's experience with similar injuries and his/her expert medical opinion. It is not simply a catalog of an individual's complaints, as this might inaccurately inflate the disability rating if the complaints are not consistent with the physician's findings. Statements in this part of the report should be consistent with the nature of the injury and with the objective findings. Work restrictions based on subjective factors that are out of proportion to objective findings require specific explanation.~~

~~The recommended description of subjective disability should include the activity which produces disabling symptoms; the intensity, frequency and duration of symptoms; a description of the activities that are precluded and those that can be performed with the symptoms; and the means necessary for relief.~~

~~2. Objective Factors of Disability~~

~~Note those findings which can be measured, observed or demonstrated on testing. They include, but are not limited to: range of motion, strength, sensation, reflexes, amputation, anatomical measurements, disfigurement, and radiographic or other diagnostic results.~~

~~Note if assistive devices, prosthetics, or orthotics are required and describe the device. Note if the device causes any limitation in motion.~~

~~3. Work Capacity~~

~~Report work restrictions for the activities the injured worker was performing at the time of the injury and for potential activities in the open labor market.~~

~~The evaluator will estimate the total or partial loss of the injured worker's pre-injury capacity to lift, walk, push, pull, climb, walk on uneven ground, squat, kneel, crouch, pivot, bear weight or other activities involving comparable physical strength. The best means is to describe the injured worker's loss of capacity, such as loss of one-quarter of his ability to lift.~~

~~Use of job history and/or description as well as other activities of daily living to estimate the pre-injury capacity, should be noted in the report to substantiate the evaluator's opinion on loss. Be as specific as possible, incorporating the injured worker's history, the RU 90, the DEU Form 100, and a formal job analysis, if it is available.~~

~~M. Apportionment~~

~~State if apportionment is indicated and provide reasons for the statement. Indicate in the report whether apportionment is for a pre-existing condition under Labor Code section 4750, an underlying disease process under Labor Code section 4663 or a subsequent non-industrial injury under Labor Code section 4750.5.~~

~~N. Further medical care~~

~~Give your recommendation for current and future treatment. If the injured worker is currently receiving treatment, indicate whether the treatment is necessary to either improve or prevent deterioration of the current condition. If you believe that additional treatment is indicated to reach maximum improvement, you should explain the type of treatment, the reasons for the treatment, and the possible benefits of the treatment.~~

~~O. Vocational rehabilitation~~

~~If requested, state if the injured employee is medically qualified for vocational rehabilitation based on your review of the job analysis.~~

~~P. Affirmations and signature~~

~~The following paragraph must be included and signed and dated by the evaluator. The report must contain an original signature by the evaluator.~~

~~"I declare under penalty of perjury that the information contained in this report and its attachments, if any, is true and correct to the best of my knowledge and belief, except as to information that I have indicated I received from others. As to that information, I declare under penalty of perjury that the information accurately describes the information provided to me and except as noted herein, that I believe it to be true."~~

~~I have not violated Labor Code Section 139.3 and the contents of the report and bill are true and correct to the best of my knowledge.~~

~~The foregoing declaration was signed in.....County, California on (date).~~

4-Good	4-complete range of motion against gravity with some resistance
3-Fair	3-complete range of motion against gravity
2-Poor	2-complete range of motion with gravity eliminated
1-Trace	1-reads evidence of slight contractility, no joint motion
0-(Zero)	0-no evidence of contractility

Examples of Muscle Grading Charts

Results may be reported using a verbal scale or a percentage loss of muscle strength as follows. In either case, the evaluator must still describe how a given loss of muscle strength affects the injured worker's capacity to perform work.

4-Good	4-complete range of motion against gravity with some resistance
3-Fair	3-complete range of motion against gravity
2-Poor	2-complete range of motion with gravity eliminated
1-Trace	1-reads evidence of slight contractility, no joint motion
0-(Zero)	0-no evidence of contractility

Kendall	Lovett	Description
100 %	Normal	The ability to hold the test position against gravity and maximum pressure, or the ability to move the part into test position and hold against gravity and maximum pressure
95 %	Normal-	
90 %	Good +	Same as above except holding

Face to face time excludes time spent on research, records review and report writing. Any time spent by the injured worker with clinical or clerical staff ~~in~~ who performing diagnostic or laboratory tests (such as including blood tests or x-rays) or time spent by the injured worker in a waiting room or other area outside the evaluation room is not included in face to face time.

(c) Medical evaluation. "Medical evaluation" means a comprehensive medical-legal evaluation as defined under section 9793 of Article 5.6, Subchapter 1, Chapter 4.5 of Title 8 of the California Code of Regulations.

(d) Neuromusculoskeletal evaluation. "Neuromusculoskeletal evaluation" means the determination of disability due to injury to the central nervous systems, the spine and extremities, and the various muscle groups of the body.

(e) Psychiatric evaluation. "Psychiatric evaluation" means the determination of disability due to psychopathology, by either a psychiatrist or psychologist following the ~~IMC guidelines on psychiatric protocols, of disability due to psychopathology.~~ Method of Measurement of Psychiatric Disability set out in section 43 of Title 8 of the California Code of Regulations.

(f) Pulmonary evaluation. "Pulmonary evaluation" means the determination of disability due to pathological changes of the lungs and/or other components of the respiratory system.

§ 65. Sanction Guidelines for Qualified Medical Evaluators

The guidelines for determining appropriate sanctions for physicians licensed as Qualified Medical Evaluators shall be set forth in the Sanction Guidelines for Qualified Medical Evaluators as adopted by the Industrial Medical Council on October 21, 1999, and re-adopted and enforced by the Administrative Director.

~~65.~~ Sanction Guidelines for Qualified Medical Evaluators

~~Part One~~

~~I. PART ONE~~ ~~Overview~~ OVERVIEW

The purpose of these guidelines is to provide a the framework of the ~~Industrial Medical Council (IMC)~~ Administrative Director's (AD) disciplinary process for those affected by it - Qualified Medical Evaluators, the ~~IMC Administrative Director~~, administrative law judges with the Office of Administrative Hearings, licensing boards and other interested parties. These guidelines are not intended to be an exhaustive list of violations or disciplinary actions that the ~~IMC Administrative Director~~ may consider against any QME. Any violation of statutory or administrative duties may constitute grounds for discipline under these guidelines.

The ~~IMC Administrative Director~~ believes that education is the most effective course of action in resolving less serious regulatory violations. These guidelines also set out the parameters for discipline for misconduct considered serious.

The ~~IMC Administrative Director~~ recognizes the need to promulgate uniform guidelines for particular violations in order to establish consistency in imposing disciplinary sanctions for similar offenses. The ~~IMC Administrative Director~~ also recognizes that mitigating or aggravating circumstances in a specific case may necessitate variance from these guidelines.

In the event of a hearing, if an administrative law judge finds that the circumstances of a particular case are not adequately addressed in these guidelines, the ~~IMC Administrative Director~~ may request that the administrative law judge include in the proposed decision an explanation of the recommended sanction and/or terms of probation, so those circumstances are better understood by the ~~IMC Administrative Director~~ during its review of the case for ultimate action.

H. A. Factors to be Considered in Determining Disciplinary Penalties

In cases of violations of Labor Code sections 139.2(k) and 139.2(m) and/or section 60 of Title 8 of the California Code of Regulations, the ~~IMC~~ Administrative Director may impose discipline, up to and including suspension or termination, upon any physician certified by the ~~IMC~~ Administrative Director as a Qualified Medical Evaluator.

In determining the level of the penalty to be imposed in a given case pursuant to section 61 of Title 8 of the California Code of Regulations, the following factors shall be considered:

- (1) the seriousness of the violation including actual or potential harm to the public and any mitigating or rehabilitation evidence;
- (2) whether or not a violation is an isolated incident or part of a pattern of behavior indicative of a disregard for the QME rules; e.g. (prior warnings of record; number and/or variety of current violations, time passed since the act(s) or offense(s));
- (3) whether or not a violation is intentional as opposed to negligent;
- (4) whether or not there is a history of previous violations cited under this section or by another court or tribunal (e.g.: prior disciplinary record, including level of compliance with disciplinary orders, compliance with terms of any criminal sentence, overall criminal record); and
- (5) whether or not further education or training would be beneficial.

HH. B. Mitigating Evidence

A respondent may present evidence at a hearing or in the settlement process and shall have the burden of demonstrating mitigating circumstances and/or any rehabilitative or corrective measures he or she has taken. The ~~IMC~~ Administrative Director does not intend, by the following references to written statements, letters, and reports, to waive any evidentiary objections to the form of such evidence. The following are examples of appropriate evidence a respondent may submit to demonstrate his/her rehabilitative efforts and competency:

~~a.~~(1) Recent, dated written statements from persons in positions of authority who have on-the-job knowledge of the respondent's current competence in the practice of his or her specialty. Each statement should include the period of time and capacity in which the person worked with the respondent and should be signed under penalty of perjury. All letters will be subject to verification by ~~IMC~~ the Administrative Director's staff.

~~b.~~(2) Recent, dated letters from counselors regarding the respondent's participation in a rehabilitation or recovery program, where appropriate. These should include at least a description and requirements of the program, a psychiatric diagnosis and current state of recovery and the psychiatrist's/psychologist's basis for determining need for rehabilitation.

~~c.~~(3) Recent, dated letters describing respondent's participation in support groups, (e. g. Alcoholics Anonymous, Narcotics Anonymous, Professional Support Groups, etc.), where appropriate.

~~d.~~(4) Recent, dated laboratory analyses or drug screen reports, where appropriate.
